

CONSTRUCTION PROJECT MANAGER · SITE ENGINEER ·
LAGOS, NIGERIA

Site. Structure. Delivered. On Time.

Four flagship site projects — a six-flat residential block, a six-bedroom duplex, a market infrastructure scheme and an international retail fit-out — delivered across Lagos, Ekiti and Benin City.

- 6-Flat Residential Block — Ikotun, Lagos
- 6-Bedroom Duplex — Ado, Ekiti State
- Oluku Ultra Modern Market — Benin City
- The Body Shop retail fit-out — Ikeja & Lekki, Lagos

The Site Professional

Vollmann Olamide Akarakiri is a Construction Project Manager and Site Engineer delivering physical construction and fit-out projects across commercial, residential and infrastructure sectors in Nigeria.

His site experience spans residential buildings from foundation to finish, market and drainage infrastructure, and retail fit-outs for international brands — coordinating subcontractors, procurement, quality control and programme on each project, and bridging BIM model to built reality.

6-Flat Residential Block, Ikotun

Six-flat residential development, Ikotun, Lagos — built from foundation. Structural frame, column casting, suspended slabs and superstructure through to the finished block.

Superstructure Under Construction

STRUCTURE

Suspended Slab & Deck Works

CIVIL

Completed 6-Flat Block

OUTCOME

6-Flat Residential Block, Ikotun

MY CONTRIBUTION

[Add: specific role and responsibilities on this project]

PROJECT CONSTRAINTS

[Add: challenges specific to this project]

PROJECT HIGHLIGHTS

A six-flat residential block delivered from foundation to a completed, finished building, with a full technical drawing set produced alongside construction.

PROJECT PROCESS

[Add: design and construction workflow — from foundation through to the completed block]

SOLUTIONS

[Add: how those challenges were addressed]

ADDITIONAL NOTES

Full write-up: `assets/Project Pictures/Ikotun Apartments/README.md`. Also featured in the Draftsman portfolio (floor plan as hero image).

6-Bedroom Duplex, Ado

Six-bedroom duplex residence, Ado, Ekiti State — two-stage delivery: structural works (foundation, columns, slabs, roofing) followed by full interior finishes.

Structural Stage & Roofing

STRUCTURE

Scaffolded Front Elevation

CONSTRUCTION

Interior Finishes Stage

FINISH

6-Bedroom Duplex, Ado

MY CONTRIBUTION

Delivered the structural phase on site — foundation, columns, slabs and roofing — then, once complete, worked with the client through interior concept exploration to final implementation.

PROJECT CONSTRAINTS

Coordinating a single client relationship across two very different delivery phases — structural construction, then interior fit-out — without losing continuity between them.

PROJECT HIGHLIGHTS

A six-bedroom duplex delivered from foundation through to a fully finished interior, as one continuous client relationship spanning both construction and interior phases.

PROJECT PROCESS

The project ran as two sequential phases: standard structural site-engineering sequencing from foundation to roof, followed by an interior phase where several design concepts were explored with the client before a preferred scheme was agreed and implemented.

SOLUTIONS

Carrying the same project team and client relationship through both phases kept the transition from shell to finished interior coherent rather than being handed off cold.

ADDITIONAL NOTES

Full write-up: `assets/Project Pictures/Ado 6-Bedroom Duplex/README.md`. Also featured, from the interior perspective, in the Interior Design portfolio.

Oluku Ultra Modern Market

Two-stage market infrastructure project — Oluku, Benin City. Stage 1: drainage system design and construction. Stage 2: shop unit structures, setting-out and site infrastructure.

Reinforced Drainage Channel

CIVIL · STAGE 1

Shop Unit Structures

STAGE 2

Setting-Out & Survey

SITE

Oluku Ultra Modern Market

MY CONTRIBUTION

[Add: specific role — e.g. site engineering, setting-out and survey, drainage design coordination]

PROJECT CONSTRAINTS

[Add: challenges specific to this project — e.g. site drainage conditions, phased construction coordination]

PROJECT HIGHLIGHTS

A reinforced drainage channel and multiple shop unit structures delivered as part of a phased market infrastructure development in Oluku, Benin City.

PROJECT PROCESS

The project was sequenced in two stages: drainage infrastructure was designed and built first to establish site water management, followed by setting-out and construction of the individual shop unit structures.

SOLUTIONS

[Add: how those challenges were addressed]

ADDITIONAL NOTES

Full write-up: assets/Project Pictures/Oluku Modern Market/README.md.

The Body Shop Outlets

Retail fit-out for two The Body Shop outlets — Ikeja City Mall and Circle Mall Lekki, Lagos. Delivered from bare shell to trading floor: joinery, flooring, fixtures, MEP and brand installation.

Finished Retail Trading Floor

FIT-OUT

Bare Shell — Before Fit-Out

STAGE

Feature Mural Wall & Display

INTERIOR

The Body Shop Outlets

MY CONTRIBUTION

Coordinated site delivery of the fit-out to The Body Shop's supplied concept and international brand standards, across two outlets.

PROJECT CONSTRAINTS

Matching an international retail brand's exacting standard to local site conditions, inside a live shopping-mall environment with fixed opening deadlines.

PROJECT HIGHLIGHTS

Two Body Shop outlets — Ikeja City Mall and Circle Mall, Lekki — delivered from bare shell to a fully trading, branded retail floor.

PROJECT PROCESS

The design concept and brand standards were supplied directly by The Body Shop's international design team; the role on site was to interpret those drawings and standards, coordinate the fit-out trades, and execute the works to specification.

SOLUTIONS

Close, hands-on coordination between the supplied brand package and the on-site trades to keep the finish faithful to spec while working within local material and labour constraints.

ADDITIONAL NOTES

Full write-up: `assets/Project Pictures/Body Shop Outlets/README.md`. Also featured in the Interior Design portfolio.
